Tab 1 is for the DataFrame Table, we could only filter it based on the Claim Site (all the unique value they had). We could also filter it by the Max Rows. To filter, we need to press the Search button first. (hint: If your table is out of bound, just add `style_table={'overflowX': 'scroll'}` line to the DataTable Parameter.

Tab 4 is for the Pie-Chart, which is based on the Claim Type and the percentage is come from the mean of the numerical column for each claim type

Don't forget the Bootstrap for the layout.
